

BENEFITS OF THIS TREATMENT

This non-invasive treatment destroys odor and sweat glands. MiraDry is a fast and effective treatment that is safe for everyone. About 80% of patients require only one treatment. Minimal downtime is required and it can be considered a “lunchtime” procedure.

SPECIAL INFORMATION ABOUT THIS TREATMENT

MiraDry typically only requires one treatment, although a second treatment may be necessary. A sweat assessment can be performed after 3 months by a provider to determine where a second treatment may be needed. During the consultation your provider will discuss your personalized treatment plan. Up to 82% of all sweat and odor should be eliminated after one treatment. The treatment takes about 90 minutes and requires numbing to make it a more comfortable experience.

PRIOR TO TREATMENT

- Shave underarms the night before and do not wear any deodorant the day of treatment. Wear a loose and comfortable shirt, due to swelling of the treated area.

POST-TREATMENT CARE

- A normal reaction includes swelling, numbness, tightness, and tenderness. Temporary numbness of the arms and even the hands can occur. You can experience these reactions lasting from 2 weeks up to 3 months. On average most patients are completely normal at the 3 month stage. There can be odor and sweat that remains, but a decrease should be noticeable in the first two weeks if not immediately after treatment. If there are any other questions please call the office.

CONTRAINDICATIONS

- You are not a candidate if you are pregnant, breast feeding, or have metal implants in the upper body near the under arms.
